

Thomas Gentry's younger brother Carlyle "Bill" Gentry (top row, far right) attended Fishers School in 1933. Educator Ruth Henning taught at Fishers through the 1930s and 1940s. Thomas Gentry remembers a big, mechanical, brass machine at the school saying: "It had the sun and moon and then when you turned the crank, the moon would get over the sun and explain how [an] eclipse worked."
